Each source's own raw values, min–max over the next 6 hours from the issue hour (before any weighting or bias correction). — means the source does not publish that metric in the window. Wide gaps between rows are real disagreement; the forecast above weights sources by measured skill.

READING THIS REPORT

Grades: each hour carries one grade, set by its WORST factor. The bands below are the thresholds in force for this report (Settings); a value in a band earns that grade, and "-" means the factor never produces that grade. Cloud is graded on the worse of cover and ceiling. The Driver column names the limiting factor with its value; open it in the web report for the boundary and sources.

Flight windows: a window is at least 2 consecutive hours graded Marginal or better; an hour with insufficient data never counts toward one. ☾ marks a window outside first-to-last light.

Time: hours are local time (WAT, UTC+1) unless suffixed Z, which is UTC (TAF, METAR and issue times). Local midnight is labelled 0001.

Units: temperature °C · wind and gusts knots · visibility metres (km in text) · cloud ceiling feet · cloud cover % · rain chance and thunderstorm probability % · QNH hPa (altimeter setting at the field) · CAPE J/kg. A figure like "28 (26–30)°C" gives the p10–p90 range; "spread" marks disagreement between sources.

Symbols: ▲ better than the pool · ▽ worse (only when the 95% interval excludes the pool) · ≈ not distinguishable from the pool · unmarked = unproven (accuracy is measured against METAR and SYNOP observations). ⚠ on a remark means a low-confidence hour; a ⚠ paragraph on the first page is a convective-warning or data-age advisory. ⚡ is lightning observed by satellite near the field (©EUMETSAT).

Hourly glyphs: the wind arrow points the way the air moves (a north wind is ↓, an east wind ←); cloud cover shows as ☀ ◔ ◑ ◕ ☁ (clear, few, scattered, broken, overcast); a shaded hour label is wholly before first light or after last light.

Terms: "No data" - no source forecast the hour, or a core group (cloud, visibility, wind) is missing and the hour could still be flyable; missing data is never given a good grade. "Low-confidence" - few or weak sources behind the load-bearing metrics; treat the grade as indicative. "Insufficient data" - too little to grade at all. "Estimated" (est.) - the value is derived, not reported by a source (dust visibility, cloud base, gusts); it is declared where used and weighted at half. "Derived" - an hour interpolated from a coarser (3-hourly or daily) source, weighted at half and never used to score accuracy.

HOW ACCURATE HAVE WE BEEN

Measured against observations (METAR/SYNOP), jos only. Verification table computed 2026-11-12. Mean absolute error (MAE): lower is better; "beats persistence" compares the best source with "it will stay as it is now" on the same hours.

Metric	Best source	Best MAE	Typical MAE	Persistence MAE	Beats persistence by	Pairs

Thunderstorm probability: dots on the dashed line mean a stated probability matched how often it happened (237588 pairs, all places pooled).

Chance of rain: dots on the dashed line mean a stated probability matched how often it happened (223611 pairs, all places pooled).

Learned bias (forecast minus observed; positive = sources run high), mean over scored sources, by local time of day. These are corrected for before sources are averaged.
